

Aroses

The AI tutor that turns your materials into mastery

Rose — voice-first, material-grounded learning across courses, study rooms, and live tutor sessions.

Document purpose: Investor & stakeholder overview · Product as of May 2026

Format: Slide-style sections — each  block $\approx$ one slide when exported to PDF or Google Slides

Slide 1 — Title

Aroses

Your materials. Your goal. One AI tutor.

Rose helps students and professionals learn from *their* PDFs, lectures, and notes — not generic internet content.

- Upload → structured course in minutes
- Talk to Rose by voice or text — grounded in your uploads
- Quizzes, spaced repetition, and session recaps built in

[Contact / demo URL / email]

Slide 2 — The problem

Learning tools weren't built for how people actually study

Pain point	Today's reality
Fragmented stack	ChatGPT for questions, Quizlet for cards, Notion for notes, YouTube for explanations — nothing connected
Generic AI	LLMs hallucinate; students can't trust answers for exam-critical material
Passive content	PDFs and lecture slides don't teach — they document
No retention loop	Read once, forget by exam week; no spaced review tied to <i>your</i> course

Students don't need another chatbot. They need a tutor who read *their* syllabus.

Slide 3 — The solution

Aroses = ingest → teach → practice → remember

One platform, one tutor (Rose), three learning modes:

Plus: Standalone **Tutor Sessions** for homework help, exam cram, or open exploration — no course required.

Slide 4 — Product pillars

Four products, one brain

Pillar	What it is	Who it's for
Course Studio	Upload materials → AI builds modules, lessons, quizzes	Creators, self-studiers
Mentored Learning	Immersive voice tutor walks you through a lesson plan	Deep understanding
Study Room	Read, highlight, ask Rose, take quizzes at your pace	Review & practice
Tutor Sessions	Ad-hoc 1:1 with Rose + live notes + recap	Just-in-time help

Explore — community catalog for published courses (network effect layer).

Slide 5 — How it works (creator flow)

From PDF to course in minutes

1. **Upload** — PDF, Word, slides, images, audio, video (with transcription)
2. **Build** — Live progress UI; AI plans outline → writes lessons → generates quizzes
3. **Review** — Edit lessons, refine with natural language, add images
4. **Publish** — Private self-study, share link, or list on Explore

Self Study mode: User describes their goal ("O-chem exam in 2 weeks") → AI calibrates depth and structure.

Slide 6 — How it works (learner flow)

Two ways to learn the same course

Mentored Learning (immersive)

- Rose teaches in chunks: explain → check question → advance
- Voice-first (hold-to-talk or live conversation)
- Side-by-side source material + auto-generated notes

Free Exploration (self-paced)

- Full course reader with sidebar navigation
- Highlights → personal quiz cards
- Module quizzes, practice again, course-wide mix
- Voice dock: "Take me to the module on X" — Rose navigates

Slide 7 — Tutor Sessions (differentiator)

ChatGPT can talk. Rose can *tutor* — with your files open.

Standalone sessions for when you don't need a full course:

- **Topic + up to 20 reference files** (PDFs, screenshots, notes)
- **Modes:** Exam prep · Homework help · Concept review · Quiz me · Exploring
- **Live notes panel** — AI-synthesized study notes (not transcript dumps)
- **Voice conversation** with barge-in, resume, echo filtering
- **End session → recap → share, edit, or convert session into a course**

Homework at 11pm. Lecture slides from yesterday. One session, one recap, optional course.

Slide 8 — Retention engine

Learn once, remember until the exam

Layer	Mechanism
Module quizzes	MCQ + AI-graded free response; wrong-answer retry
Personal / Focus quiz	Generate questions from <i>your</i> highlights and notes
Spaced repetition (SRS)	SM-2 scheduling; global review dashboard
Progress	Module completion, accuracy rings, 14-day activity heatmap, streaks

The loop: Read → highlight → personal cards → daily review → module quiz → complete.

Slide 9 — Why now

AI + voice + documents = new category

- **LLMs** can generate structured curricula from raw uploads
- **Voice** is finally good enough for real tutoring (STT + streaming TTS)
- **Students** already pay for fragmented tools (\$10–20/mo each)
- **Creators** want to publish and share structured content, not just PDFs

Aroses sits at the intersection: document-grounded AI + voice tutor + spaced repetition — in one product.

Slide 10 — Competitive landscape

	Generic AI chat	Course platforms	Flashcard apps	Aroses
Grounded in <i>your</i> uploads	Partial	✓ (static)	×	✓
Voice tutor	Some	×	×	✓
Auto-generated course structure	×	Manual	×	✓
Live notes + recap	×	×	×	✓
SRS tied to course + personal notes	×	×	✓ (disconnected)	✓
Ad-hoc tutor session (no course)	✓	×	×	✓

Slide 11 — What's live today

Production-ready platform (May 2026)

Platform

- Auth (email + Google), onboarding, profile, dark mode
- Home workspace with resume carousel & review nudges
- Admin dashboard (users, courses, metrics)

Course & ingest

- Multi-format upload (PDF, Office, media, batch)
- Build theater with transcript review for audio/video
- AI refine, lesson editing, lesson images
- Public Explore catalog + share links

Slide 12 — Business model (opportunity)

Multiple monetization paths — pick your wedge

Model	Example
Freemium SaaS	Free: 1 course, limited tutor minutes · Pro: unlimited + SRS + voice
Creator tier	Publish to Explore, analytics, custom branding
Institutional	Campus / tutoring center licenses
Session packs	Tutor session minutes or recap exports

Natural expansion: B2C students → creators → schools → corporate upskilling (same ingest → teach pipeline).

Slide 13 — Go-to-market angles

1. **Exam-season wedge** — “Upload your slides, Rose builds your study plan”
2. **Creator / educator** — Publish courses to Explore; share links
3. **Tutor session hook** — Zero setup homework help → convert to course
4. **SRS habit loop** — Daily review badge → retention & return visits

Virality: Share links (courses + session recaps) · Explore catalog · “Convert session to course”

Slide 14 — Technology (high level)

- **Stack:** Next.js, Supabase (auth, DB, storage), Anthropic Claude, Deepgram, ElevenLabs
- **Architecture:** Streaming SSE for tutor turns; background ingest jobs for large PDFs/video
- **Grounding:** Rose's answers constrained to uploaded material + session transcript
- **Memory:** Running discussion summaries + transcript persistence for long sessions

Defensibility over time: User progress graph, personal quiz banks, session history, creator catalog on Explore.

Slide 15 — Roadmap (illustrative)

Horizon	Focus
Now	Core loop polished: tutor notes, voice reliability, progress, SRS
Next	Mobile-optimized voice · longer session memory · team/classrooms
Later	Creator monetization · institutional admin · API/partnerships

Customize based on your actual priorities.

Slide 16 — The ask

[Fundraising / partnership / pilot — customize]

We're building the AI tutor students actually use — grounded in their materials, voice-native, and built to remember.

Raising	[\$X] [Seed / Pre-seed]
Use of funds	[Engineering · GTM · infra]
Milestone	[X users / Y courses / pilot with Z]

Appendix A — Feature checklist (due diligence)

- ▶ **Course creation**
- ▶ **Mentored Learning**
- ▶ **Study room & quizzes**
- ▶ **Tutor sessions**
- ▶ **Review & progress**

Appendix B — Export tips

To PDF: Open in VS Code / Cursor → Markdown PDF extension, or paste into Notion → Export PDF

To slides: Paste each `---` section into Google Slides or Pitch one slide at a time

To live demo: Use `/intro` → sign up → Create course OR Start tutor session

Aroses · Confidential — for investor & partner review
